

## ARCH 331. Study Guide for Quiz 3

This guide is not providing “answers” for the conceptual questions. It is a list of topical concepts and their application you should be familiar with. It is an *aid* to help prepare for the quiz.

---

### Covers material of Lectures 9, 10, 11 & 12

- |  |   |
|--|---|
| <input type="checkbox"/> Equivalent center of load area  | <input type="checkbox"/> Pinned arches and frames   |
| <input type="checkbox"/> Equivalent Force Systems  | <input type="checkbox"/> Rigid vs. non-rigid pinned frames                                    |
| <input type="checkbox"/> Composite shape   | <input type="checkbox"/> Rigid frame behavior   |
| <input type="checkbox"/> Centroid, moment of inertia, $Q$ , radius of gyration                 | <input type="checkbox"/> Internal pin connections   |
| <input type="checkbox"/> Negative area method  | <input type="checkbox"/> Free Body Diagram rule for force at a pin of a frame                 |
| <input type="checkbox"/> Parallel axis theorem   | <input type="checkbox"/> Two-force bodies and relationship to loads                           |
| <input type="checkbox"/> Bending & shear stress (beams)  | <input type="checkbox"/> Three-force bodies   |
| <input type="checkbox"/> Relation of strain to stress & Modulus of Elasticity                  | <input type="checkbox"/> Moment <i>redistribution</i> for statically indeterminate beams      |
| <input type="checkbox"/> Neutral axis, section modulus, $Q$ , extreme fiber                    | <input type="checkbox"/> Connection types and load/moment transfer                            |
| <input type="checkbox"/> Stiffness (relative to $EI/L$ through $\Delta$ )                      | <input type="checkbox"/> Types and purpose of bracing   |
| <input type="checkbox"/> Maximum bending stress (& location along length and in cross section) | <input type="checkbox"/> Stability  |
| <input type="checkbox"/> Maximum shear stress (& location along length and in cross section)   | <input type="checkbox"/> Buckling   |
| <input type="checkbox"/> Maximum shear stress by beam shape (proper equations)                 | <input type="checkbox"/> Slenderness  |
| <input type="checkbox"/> Economical selection by A or S charts                                 | <input type="checkbox"/> Critical Buckling and Euler's Formula                                |
| <input type="checkbox"/> Shear flow and shear center   | <input type="checkbox"/> Effective length, K & bracing  |
| <input type="checkbox"/> Connected area  | <input type="checkbox"/> Beam-columns   |
| <input type="checkbox"/> Nail capacity and pitch for resisting longitudinal shear              | <input type="checkbox"/> Combined bending and compression - <i>interaction</i>                |
| <input type="checkbox"/> Statically Determinate vs. Indeterminate                              | <input type="checkbox"/> P- $\Delta$ effect   |
| <input type="checkbox"/> Restrained  | <input type="checkbox"/> Eccentricity   |
| <input type="checkbox"/> Continuous  | <input type="checkbox"/> Load combinations on rigid frames                                    |
| <input type="checkbox"/> Inflection point  | <input type="checkbox"/> One-way and two-way slab behavior and support types                  |
| <input type="checkbox"/> Compound beams with pins  | <input type="checkbox"/> Relative joint stiffness for determining effective length ( $\psi$ ) |
| <input type="checkbox"/> Use of Beam Diagrams and Formulas                                     |   |
