ARCHITECTURAL STRUCTURES: FORM, BEHAVIOR, AND DESIGN

ARCH 331

DR. ANNE NICHOLS

FALL 2013

twenty eigh

masonry construction: beams & columns

Masonry Construction 1 Lecture 28 Architectural Structures ARCH 331 F2010abn

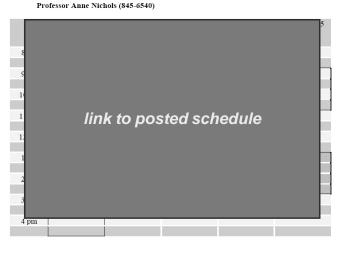

Masonry Design

• Masonry Standards Joint Committee

- ACI, ASCE, TMS
- ASD (+empirical)
 - · linear-elastic stresses
- LRFD added in 2002
- referenced by IBC
- unreinforced allows tension in flexure
- reinforced all tension in steel
- walls are also in compression International Masonry Institute (Brian Trimble)

Masonry Construction 2 Lecture 28 Architectural Structures ARCH 331 F2012abn

Masonry Beam & Wall Design

reinforcement increases capacity & ductility

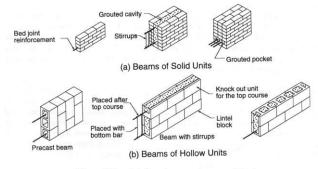

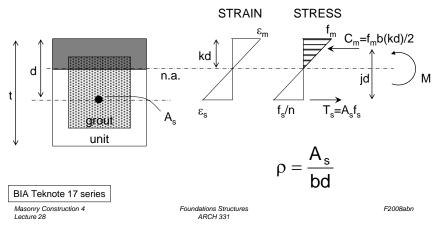

Figure 2.10 Reinforced masonry beams and lintels.

Masonry Construction 3 Lecture 28 Foundations Structures ARCH 331

Masonry Design

- f_s is not the yield stress
- f_m is the stress in the masonry

Masonry Materials

- mortar
 - water. masonry cement, sand, lime
 - types:

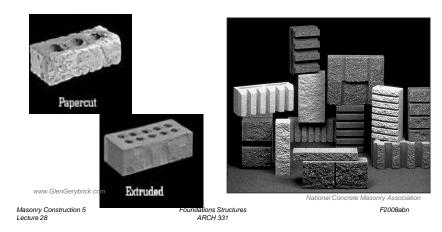

- medium high strength 1800 psi
- medium strength 750 psi
- medium low strength 350 psi
- low strength 75 psi

National Concrete Masonry Association

F2008abn

Masonry Materials

- units
 - stone, brick, concrete block, clay tile

Masonry Materials

- rebar
- grout
 - fills voids and fixes rebar
- prisms

Masonry Construction 7

- used to test strength, f'_{m}
- fire resistant

Ryan-Briggs Associates

ARCH 331

Foundations Structures F2008abn

Masonry Materials

- moisture resistance
 - weathering index for brick
 - bond and detailing
 - expansion or shrinking from water
 - · provide control joints
 - parapets, corners, long walls

parapet with no control joint

WEATHERING REGIONS

THE NEGLIGIBLE WEATHERING

MODERATE WEATHERING
SEVERE WEATHERING

Masonry Construction 8 Foundations Structures
Lecture 28 ARCH 331

Allowable Masonry Stresses

• tension - <u>unreinforced</u> only

Table 2.2.3.2 — Allowable flexural tensile stresses for clay and concrete masonry, psi (kPa)

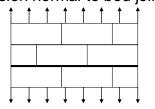

Direction of flexural tensile stress and masonry type	Mortar types			
	Portland cement/lime or mortar cement		Masonry cement or air entrained portland cement/lime	
	M or S	N	M or S	N
Normal to bed joints				
Solid units	53 (366)	40 (276)	32 (221)	20 (138)
Hollow units ¹				
Ungrouted	33 (228)	25 (172)	20 (138)	12 (83)
Fully grouted	86 (593)	84 (579)	81 (559)	77 (531)
Parallel to bed joints in running bond				
Solid units	106 (731)	80 (552)	64 (441)	40 (276)
Hollow units				
Ungrouted and partially grouted	66 (455)	50 (345)	40 (276)	25 (172)
Fully grouted	106 (731)	80 (552)	64 (441)	40 (276)
Parallel to bed joints in masonry not laid in running bond				
Continuous grout section parallel to bed joints	133 (917)	133 (917)	133 (917)	133 (917)
Other	0 (0)	0 (0)	0 (0)	0 (0)

For partially grouted masonry, allowable stresses shall be determined on the basis of linear interpolation between fully grouted hollow units and ungrouted hollow units based on amount (percentage) of grouting.

Masonry Construction 9 Foundations Structures F2008abn
Lecture 28 ARCH 331

Masonry Walls

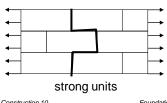

tension normal to bed joints

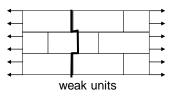

WALLS

Not allowed in MSJC code

tension parallel to bed joints

Masonry Construction 10 Lecture 28

Foundations Structures ARCH 331

F2008abr

F2008abn

Allowable Reinforcement Stress

- tension
 - a) Grade 40 or 50 $F_s = 20 \text{ ksi}$
 - b) Grade 60
- $F_s = 32 \text{ ksi}$
- c) Wire joint
- $F_s = 30 \text{ ksi}$
- *no allowed increase by 1/3 for combinations with wind & earthquake
 - did before 2011 MSJC code

Allowable Masonry Stresses

- flexure
 - $-F_{h} = 1/3 f'_{m}$ (unreinforced)
 - $-F_b = 0.45 \, f_m$ (reinforced)
- shear, unreinforced masonry
 - $-F_{v} = 1.5 f'$

≤ 120 psi

- shear, reinforced masonry
 - $M/Vd \le 0.25$:

- M/Vd > 1.0:

 $F_{\nu} =$

Masonry Construction 11

Architectural Structures

F2008abn

Reinforcement, M_s

 ΣM about C_m : $M_s = A_s f_s id = \rho bd^2 if_s$

if f_s=F_s (allowable) the moment capacity is limited by the steel

MSJC: $F_s = 20$ ksi, 24 ksi or 30 ksi by type

Reinforcement, M_m

if f_s=F_s (allowable) the moment capacity is limited by the steel

MSJC
$$F_b = 0.33f'_m$$

Masonry Construction 15 Lecture 23

Architectural Structures III ARCH 631

F2010abn

Strategy for RM Flexural Design

- to size section and find reinforcement
 - find ρ_b knowing f'_m and f_v
 - size section for some $\rho < \rho_h$

• get k, j
•
$$bd^2 = \frac{M}{\rho j F_s}$$

• get b & d in nice units

needs to be sized for shear also

- size reinforcement (bar size & #): $A_s = \frac{M}{F_s jd}$

- check design: $M_s = A_s F_s jd > M$

$$f_b = \frac{M}{0.5bd^2jk} < F_b$$

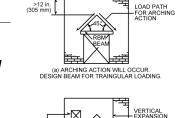

Masonry Construction 15 Lecture 28

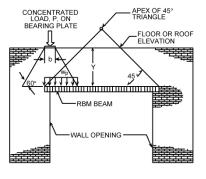

Foundations Structures ARCH 331

F2008abn

Masonry Lintels

- distributed load
 - triangular or trapezoidal

Masonry Construction 16

Foundations Structures

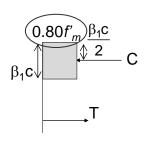

F2010abr

JOINT

Ultimate Strength Design

- LRFD
- like reinforced concrete
- useful when beam shear is high
- improved inelastic model
 - ex. earthquake loads

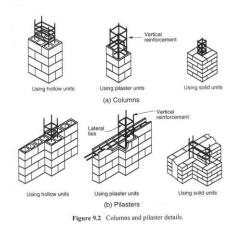

Masonry Construction 16

Foundations Structures ARCH 331

Masonry Columns and Pilasters

must be reinforced

Masonry Construction 17 Lecture 28

Foundations Structures ARCH 331

F2008abn

Masonry Columns

- allowable axial load

Nilowable axial load
$$P_a = \begin{bmatrix} 0.25f'_m A_n + 0.65A_{st}F_s \end{bmatrix} I - \left(\frac{h}{140r}\right)^2$$

$$h/r \le 99$$

$$P_a = \left[0.25 f'_m A_n + 0.65 A_{st} F_s \right] \left(\frac{70r}{h}\right)^2$$

$$h/r > 99$$

h= effective length

 A_n = effective area of masonry

 A_{st} = effective area of column reinforcement

 F_s = allowable compressive stress in column reinforcement

(lesser of 0.4f_v or 24 ksi)

Masonry Columns and Pilasters

- considered a column when b/t<3 and h/t>4
 - b is width of "wall"
 - t is thickness of "wall"
- slender is
 - 8" one side
 - -h/t < 25
- needs ties

Lecture 28

eccentricity may be required

Masonry Construction 18 Foundations Structures

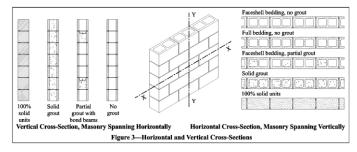

F2008abr

Masonry Walls (unreinforced)

- allowable axial stresses

$$F_{a} = 0.25 f'_{m} \left[1 - \left(\frac{h}{140r} \right)^{2} \right] \qquad F_{a} = 0.25 f'_{m} \left(\frac{70r}{h} \right)^{2}$$

$$h/r \le 99 \qquad h/r > 99$$

Masonry Construction 20

Foundations Structures

Design

masonry columns and walls (unreinforced)

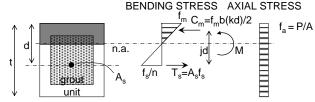

$$\begin{split} \frac{f_a}{F_a} + \frac{f_b}{F_b} &\leq 1.0 \quad \text{and} \quad f_b - f_a \leq F_t \\ - h/r &< 99 \qquad F_a = 0.25 f_m' \bigg[1 - \bigg(\frac{h}{140 r} \bigg)^2 \bigg] \\ - h/r &> 99 \qquad F_a = 0.25 f_m' \bigg(\frac{70 r}{h} \bigg)^2 \\ F_b &= 0.33 f_m' \end{split}$$

Masonry Construction 21 Lecture 28 Foundations Structures ARCH 331 F2008abn

Design

- masonry columns and walls with rebar
 - wall reinforcement usually at center and ineffective in compression

$$f_a + f_b \leq F_b \quad \textit{provided} \quad f_a \leq F_a$$

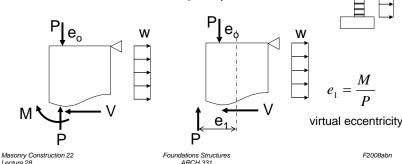

for equilibrium: $\sum F = P = C_m - T_s$

Masonry Construction 23 Foundations Structures
Lecture 28 ARCH 331

F2008abn

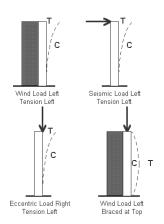

Design

- · masonry columns and walls loading
 - wind loading
 - eccentric axial load
 - "virtual" eccentricity, e1

Design Steps Knowing Loads

- 1. assume limiting stress
 - buckling, axial stress, combined stress
- 2. solve for r, A or S
- 3. pick trial section
- 4. analyze stresses
- 5. section ok?
- 6. stop when section is ok

Masonry Construction 24

Foundations Structures ARCH 331

Final Exam Material

- my list:
 - systems
 - · components & levels
 - · design considerations
 - equilibrium ΣF & ΣM
 - supports, trusses, cables, beams, pinned frames, rigid frames
 - materials
 - strain & stress (E), temperature, constraints

Masonry Construction 26 Lecture 28 Foundations Structures ARCH 331 F2008abn

Final Exam Material

- my list (continued):
 - foundations
 - types
 - sizing & structural design
 - · overturning and sliding
 - design specifics
 - steel (ASD & LRFD)
 - · concrete
 - wood
 - masonry

Final Exam Material

- my list (continued):
 - beams
 - distributed loads, tributary width, V&M, stresses, design, section properties (I & S), pitch, deflection
 - columns
 - stresses, design, section properties (I & r)
 - frames
 - P, V & M, P-∆, effective length with joint stiffness, connection design, tension member design

Masonry Construction 27 Lecture 28 Foundations Structures ARCH 331 F2008abr
